

List of mountain ranges

This is a list of mountain ranges on Earth and a few other astronomical bodies. First, the highest and longest mountain ranges on Earth are listed, followed by more comprehensive alphabetical lists organized by continent. Ranges

Physiographic world map with mountain ranges and highland areas in brown, pink, and gray

in the oceans and on other celestial bodies are listed afterwards.

Mountain ranges on Earth

By height

Name	Continent(s)	Country/ies	Highest point	Altitude (metres above sea level)

<u>Caucasus Mountains</u>	Europe and Asia	<u>Armenia</u> , <u>Georgia</u> , <u>Russia</u> , <u>Azerbaijan</u>	<u>Mount Elbrus</u>	5642

Note 1: A peak included in the "Eastern Pamirs"^[1] more often than in the Kunlun Mountains, as Kongur Tagh and the Kunlun range are *separated* by the large Yarkand River valley; no valley of such significance separates the Pamirs and Kongur Tagh, just political boundaries.

Note 2: Part of Hindu Kush-Himalayas region

All of the Asian ranges above have been formed in part over the past 35 to 55 million years by the collision between the Indian Plate and Eurasian Plate. The Indian Plate is still particularly mobile and these mountain ranges continue to rise in elevation every year and this page may need to be updated in a few years; of these the Himalayas are rising most quickly; the Kashmir and Pamirs region to the north of the Indian subcontinent is the point of confluence of these mountains which encircle the Tibetan Plateau.

By prominence

See List of peaks by prominence (ranking the mountain ranges as well).

Mountain ranges by length

Mountain systems, Himalayan ranges and chains by length (over 500 km):

1. The underwater Mid-ocean ridge – 65,000 km (40,000 mi)
2. Ring of Fire – 40,000 km (25,000 mi)^[2]
 1. American Cordillera – 13,400 km (8,300 mi)
 1. Andes – 7,000 km (4,300 mi). Northern and Southern Andes main subdivisions, along both run three vast, almost parallel chain systems of mountain ranges – Cordillera Occidental, Cordillera Central and Cordillera Oriental.
 2. North American Cordillera – 6,400 km (4,000 mi)
3. Alpine-Himalayan orogenic belt – more than 15,000 km (9,300 mi)
 1. Hindu Kush-Himalayas region – 3,500 km (2,200 mi)^[3]
